Design

/~gibson/Teaching/CSC7003/L5-Design.pdf
Nice design....
but you haven't quite mastered the technology!
Some Software Design Quotes

*The designer of a new kind of system must participate fully in the implementation.*
—Donald E. Knuth

... the designer of a new system must not only be the implementor and the first large-scale user; the designer should also write the first user manual. ... If I had not participated fully in all these activities, literally hundreds of improvements would never have been made, because I would never have thought of them or perceived why they were important.
—Donald E. Knuth
Some Software Design Quotes

I have yet to see any problem, however complicated, which, when you looked at it in the right way, did not become still more complicated.
—Poul Anderson

There are two ways of constructing a software design. One way is to make it so simple that there are obviously no deficiencies. And the other way is to make it so complicated that there are no obvious deficiencies.
—C.A.R. Hoare

... with proper design, the features come cheaply. This approach is arduous, but continues to succeed.
—Dennis Ritchie
Some Software Design Quotes

*It's hard to read through a book on the principles of magic without glancing at the cover periodically to make sure it isn't a book on software design.*
—Bruce Tognazzini

*Good judgement is the result of experience ... Experience is the result of bad judgement.*
—Fred Brooks

*Programs must be written for people to read, and only incidentally for machines to execute.*
—Abelson and Sussman
Some Software Design Quotes

To keep large programs well structured, you either need superhuman will power, or proper language support for interfaces.
—Greg Nelson

Design and programming are human activities; forget that and all is lost.
—Bjarne Stroustrup

The hardest part of design ... is keeping features out.
—Donald Norman

Beauty is more important in computing than anywhere else in technology because software is so complicated. Beauty is the ultimate defense against complexity.
—David Gelernter
Some Software Design Quotes

*Design is the art of separation, grouping, abstraction, and hiding. The fulcrum of design decisions is change. Separate those things that change for different reasons. Group together those things that change for the same reason.*
—Robert Martin

*The tragedy of our time is that we've got it backwards, we've learned to love techniques and use people.*
—Herb Kelleher
How To Judge If A Design Is Good?

“Now that you have an overview of the system, we’re ready for a little more detail”
